

Alejandro De La Torre

L I S 440

Exercise: *Installing Thonny*

Code Front

```
print("Hello Alejandro De La Torre")
```

By the way, to format outputs and code, we typically use LaTeX to typeset code if we are not working in an .ipynb file (jupyter notebook) so that the code and outputs are organized in a nicer way. In the future, could I typeset my results in LaTeX? (Find an example of how this can look like [here](#)—skip to Bernoulli simulation).
