

Ice Cream Sunday Code

Alejandro De La Torre

October 2025

1 Classwork

Here is the code we did for today; I wanted to organize my files so a lot of it was just setting my working directory and less playing with the data.

```
1 # Make sure to go to tools > download openpyxl to import
2 #   excel sheets directly but only doing csv for this
3
4 # Import the necessary packages
5 import pandas as pd
6 import os
7 from pathlib import Path
8
9
10 # --- Define base directories ---
11 # __file__ gives you the path of this script: /Week 9/Scripts/
12 #   sunday_icecream.py
13 BASE_DIR = Path(__file__).resolve().parents[1] # One level up
14 #   /Week 9
15
16 # Subfolders relative to the base directory
17 INPUT_DIR = BASE_DIR / "Input"
18 TEMP_DIR = BASE_DIR / "Temp"
19 OUTPUT_DIR = BASE_DIR / "Output"
20
21 # Fetch the ice cream data from temp folder
22 ice_cream_data = TEMP_DIR / "icecreamWeek_f25_AlejandroDeLaTorre.
23 #   csv"
24
25 # --- Read data ---
26 df = pd.read_csv(ice_cream_data)
27
28 # Quick check to see that it loaded
29 print("Data loaded successfully!")
30 print(df.head())
31
32 # Now lets play with the data a bit
33 print(df) # to see the whole data since not that big
34 print(df.Cup) # Print the Cup column of the data
```

Listing 1: Code from: sunday_icecream.py
